- System Quality Assurance
- Processing Engineering

Matthew Alexis Pascua

- Main Developer
- Database Developer

INTRODUCTION

- A system designed to manage concerns, requests, and issues efficiently
- Helps organize tickets across different departments in one platform
- Ensures proper tracking from submission to resolution
- Improves communication between users and departments

PROBLEMS

- No proper tracking of requests
- Requests may be delayed or forgotten
- No clear assignment of responsibility
- Difficult to monitor request status
- Lack of accountability and follow-up
- Inefficient communication between departments

SOLUTIONS

- A centralized ticketing system for managing all concerns
- Provides organized and trackable requests in one platform
- Helps improve response time and overall efficiency
- Ensures proper handling and resolution of issues

KEY FEATURES

- Ticket Submission
- Monitor ticket status
- Knowledge Base
- Notifications and updates
- Chat / Messaging feature
- Ticket history and records
- Book Conference Room
